The **Centre for Pediatric Pain Research** is partnering with the **Cancer Knowledge Network**, North America's most widely read online cancer education resource, to bring the **best research evidence** about children's cancer pain to parents who can use it.

Children with cancer often have pain from procedures, treatments, or the disease itself. Unfortunately, they don't always get the best pain management possible. Parents are often looking for more solutions to help their children.

We will be bringing parents the very best research evidence about children's cancer pain – what causes it, how to assess it, how to treat it, common myths, and more!
